SUMMARY

Passionate and result driven Data Science & AIML enthusiast with hands on experience in data analysis, Machine Learning, Deep Learning and Flask based Model Deployment. Skilled in Python, scikit-learn, TensorFlow and NLP with strong foundation in Statistics.

EDUCATION

Shri Guru Sandipani Institute of Technology and Science (RGPV) Ujjain, India
Bachelor of Engineering in Computer Science Engineering | CGPA: 7.81 2022 – 2026

SKILLS

Programming Languages: Python, SQL
ML: Supervised & Unsupervised Learning, scikit-learn, Regression, Classification, NLP
Deep Learning: TensorFlow, Neural Network(CNN, RNN), NLTK, Text Preprocessing
Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn, EDA, Power BI, Plotly
Databases & Tools: MySQL, PostgreSQL, GitHub, Jupyter Notebook, Streamlit, Flask, FastAPI
AI & Automation: LLM, Chatbot, Gen AI, LangChain, RAG

EXPERIENCE

Infotact Solutions - Bangalore, India
Data Science & ML Intern - Remote May 2025 – Aug 2025

- Collaborate with teams to develop data-driven solutions. Collecting, cleaning, and preprocessing structured & unstructured data.
- Building and deploy ML models using Python and related frameworks. Performed EDA and create visualizations.
- Optimization of models for accuracy and performance. Document code, methods, and results.

PROJECTS

AI City Digital Twin

- Built an AI-based Digital Twin system to model and simulate real-world city environments for smart urban planning.
- Implemented data-driven simulations and predictive analytics to analyze traffic patterns, environmental conditions, and emergency scenarios.
- Integrated machine learning techniques to generate actionable insights for resource optimization and decision-making.
- Developed an interactive system with real-time data processing and visualization, improving monitoring and operational efficiency.

Employee Churn Prediction App

- Built an end-to-end Employee Churn Prediction system using machine learning techniques to identify employees likely to leave the organization.
- Performed data preprocessing, feature engineering, and trained multiple models to improve prediction performance.
- Developed a user-friendly web interface using Flask to make real-time predictions based on user inputs.

Movie Review Analyzer System

- Developed a Movie Review Sentiment Analyzer using RNN and NLP techniques to classify reviews as positive or negative.
- Applied text preprocessing steps like tokenization, padding, and embedding to prepare data for deep learning models.
- Trained and optimized an RNN model to capture sequential patterns in text and improve prediction accuracy.
- Integrated the model into a simple web app using streamlit for real-time sentiment prediction from user input.

AI Task Management System

- Developed an AI-powered Task Management System using Natural Language Processing (NLP) to automatically classify and prioritize tasks based on their content.
- Implemented machine learning models (Naive Bayes, SVM) with TF-IDF feature extraction to achieve accurate task categorization and prediction.
- Built a priority prediction module using ensemble techniques to optimize task scheduling and improve workload distribution.
- Designed an interactive Flask-based dashboard with real-time insights.

CERTIFICATION

- Complete Generative AI course with langchain and huggingface – Udemy (Krish Naik)
- Data Science with Generative AI – PW Wallah
